REMOTE-CONTROL KEYFOBS

Thanks to the two-way signal exchange between the transceiver and the Inim remote-control keys, all models of Air2 keys are capable of notifying the user, by means of visual and audible feedback signals (beep and LED signals) of the successful outcome of requested operations.

The keyfob has 4 buttons which can be programmed from the control panel.

The remote-control keyfob will allow the user to arm and disarm the anti-intrusion system, open a gate or switch on lights.

The device provides audible and/or visual confirmation of the successful outcome of the required command.

These remote-control keyfobs are also equipped with a useful 'lock keyfob' feature which protects the device against the execution of commands caused by accidental pressure on the buttons.

Main features	KF100/S	Pebble/S	Ergo/S
Communication with wireless devices		Two-way	
Operating frequency		868 MHz	
Programmable supervision time of wireless devices		from 12 to 250 minutes	
Keyfobs managed by Air2-BS200	30 by Air2-BS200/10, 50 by Air2/BS200/30, 100 by Air2-BS200/50
