

## 6933AMP

### Outdoor curtain detector using Triple Technology (PIR, radar & active infrared), white version, without T-bracket

#### Triple technology inside

---

This white curtain detector is an outdoor motion sensor and alarm trigger that uses two independent passive infrared detectors and a microwave sensor module. All three sensors must trigger to cause the detector to signal an intruder alarm. In addition it has active infrared technology on board used to detect an anti-masking attempt of the detector. Due to its size it can be smoothly integrated in residential applications.

#### Easy and quick to install

---

Programmable options include a variable pulse count and LED able/disable functionality.

Integrated dip switches allow the installer to select out of 4 predefined ranges depending on the application it will be used for.

The product concept caters for 3 possible installations: flat on the wall, 90° perpendicular to the wall using the T-bracket or using a swivel bracket. The two types of bracket can be bought as an accessory.
