

## DF950-CM

### CD UCM (Universal Configuration Module) Software + FlexPS/PI Product documentation + interface cable

The Universal Configuration Module (UCM) is a windows-based software application that performs the calibration, setup, maintenance and diagnostic functions for the line of intrusion detection sensors. The UCM connects directly to the FlexPS/FlexPI/FlexZone processors via USB. Network based processors can also connect remotely via the Network Manager.

The kit includes a CD with the UCM software and the full FlexPS/FlexPI/FlexZone product documentation and the interface cable to connect your computer to the processor.

### Details

- Windows-based SW
- Connect via standard USB connection
- Retrieve event history (up to 1,024 events)
- Adjust system operation parameters while viewing live fence data
- Can connect remotely via the Network Manager (for network enabled processors)

# DF950-CM
